mcanally presents an academically rigorous spiritually rich approach to the myriad global issues related to water the author draws from christianity s sacramental consciousness of baptism loving service of the yamuna river in hinduism and the compassionate wisdom of the bodhisattva to develop an integral approach to water ethics building on but distinct from the foundation laid by christiana zenner s just water this book is a welcome addition to the growing field of concern surrounding global water crises

in all the ancient religious texts around the world we found 3 major claims regarding the life giving substance we call water firstly that water was in the beginning of all creation for example in the bible we found that the spirit of god moved upon the face of the waters genesis 1 2 god created a firmament in the midst of the waters divide the waters from the waters genesis 1 6 and founded the earth upon waters genesis 1 9 the second major claim is that the ultimate origin of water in the earth s hydrosphere is in the deep earth e g exodus 17 6 numbers 20 8 11 judges 15 19 and thirdly that water has the power to heal bless nourish life bring happiness and take away sins on the other hand in biology we learn that we spend our first 38 40 weeks of existence in our mother s womb surrounded by the amniotic fluid 98 water in our fetus stage we are made up by 94 water while as adults all our major internal organs and fluids are made up from water our blood about 92 water our lungs 84 our muscles and kidneys 79 our brain the spinal cord the nerve trunks and our heart about 73 water from the molecular point of view we are made up from 99 of the substance that we call water and everything we do is related to water our health the food we eat the type of energy we use the homes we live in the work we do and how we travel to and from work the clothes we wear the way we re spending out free time and so on even more in 2014 the researchers from the university of alberta edmonton canada and northwestern university evanston illinois confirmed in the prestigious scientific journals nature and science that the earth s water came from within from where did water originated on our blue planet could it be in the

beginning of all life could it have the ability to heal as claimed in all the major religious texts or is just an odorless and tasteless liquid having the well known formula H_2O

drawing from a variety of religious teachings anthropological evidence and myths and legends from around the world this book examines how the essential element water plays a vital role in all aspects of our spiritual lives

the Nile is arguably the most famous river in the world for millennia the search for its source defeated emperors and explorers yet the search for its source also contained a religious quest a search for the origin of its divine and life giving waters Terje Oestigaard reveals how the beliefs associated with the river have played a key role in the cultural development and make up of the societies and civilizations associated with it drawing upon his personal experience and fieldwork in Africa including details of rites and ceremonies now fast disappearing the author brings out in rich detail the religious and spiritual meanings attached to the life giving waters by those whose lives are so bound to the river part religious quest part exploration narrative the author shows how this mighty river is a powerful source for a greater understanding of human nature society and religion

the Oxford Handbook of the Archaeology of Ritual and Religion provides a comprehensive overview by period and region of the relevant archaeological material in relation to theory methodology definition and practice although as the title indicates the focus is upon archaeological investigations of ritual and religion by necessity ideas and evidence from other disciplines are also included among them anthropology ethnography religious studies and history the handbook covers a global span Africa Asia Australasia Europe and the Americas and reaches from the earliest prehistory the Lower and Middle Palaeolithic to modern times in addition chapters focus upon relevant themes ranging from landscape to death from taboo to water from gender to rites of passage from ritual to fasting and feasting written by over sixty specialists renowned in their respective fields the handbook presents the very best in current scholarship and will serve both as a comprehensive introduction to its subject and as a stimulus to further research

despite the central importance that water has held for civilizations both ancient and modern its social significance has made surprisingly little impact on our contemporary understanding of human history and development dominant interpretations of the

relationship between society and nature have remained water blind in water and society historian and leading water expert terje tvedt argues for a change that acknowledges the significant role played by water in societal development reflecting his expertise as a geographer historian and a political scientist and drawing on his wide experience of water issues around the world terje tvedt s water and society provides a long overdue reappraisal of the relationship between water and society one that gives water its rightful place as central to any true understanding of human history and development

the great importance of detailed data and their use in generating interdisciplinary scientific knowledge on the development and utilisation of the water systems of the arab region with its widespread water stress and desert areas is well established with increasing consumption of water in the region backed up by the growing population the per capita availability of freshwater in the coming years is expected to cause severe scarcity unless some fundamental and anticipatory changes are introduced in the management of their water systems towards that end such a rich book will prove to be a great help the book is the last one written by the author and the depth of data presentation and analysis clearly indicates the professional maturity with which it has been written accordingly the book is the final expression of the lifelong work and scholarship of professor mamdouh shahin the arab region has been the home of some of the earliest human civilisations and their history is also a continuum of human endeavours towards ensuring the access to water over an expanding space and time the presentation of the important elements of history of the region as related to water will prove to be a rich reference

the christian religion is deeply imbued with the imagery of water and water plays a central role in its religious practices not least in baptism yet the wider role of water in christianity has been little explored in this pioneering book terje oestigaard uses the dramatic changes that took place in perceptions of water during the reformation to reveal the importance that water played in structuring society and religion in the post reformation period prior to the reformation most common people believed misfortune and catastrophe were caused by the devil and sought protection in the use of holy water blessed by the local priest holy water and holy wells gave laypeople a powerful weapon which could be used to keep the devil away cure illness and protect fields property and family but with the reformation the nature of holy water was challenged and belief in the

efficacy of holy water and holy wells was attacked as popish magic and superstition the status of holy water became one of the main battlegrounds between protestants and catholics the author explores these conflicting views on the spiritual qualities of water and their consequences for society at large he traces the changing views of nature that arose with enlightenment developments in the scientific understanding of water and the hydrological cycle and shows how the emergence of a natural theology helped encourage a belief in the protestant work ethic whereby wealth and economic success equated with religious excellence the author concludes by examining and challenging weber s claim that the protestant work ethic and capitalist spirit of enterprise that was so important to the later success of the industrial revolution came about when magic and superstition were eliminated from religion by the reformation the result is a highly original work that provides one of the most detailed explorations of the importance of the role of water in structuring society and religion in post reformation england offering fresh insights into the development of society and religion it will be welcomed by all those with an interest in water religion sociology and the reformation period
