the last decade has seen a steady increase in the application of concepts from noncooperative game theory to such diverse fields as economics political science law operations research biology and social psychology as a byproduct of this increased activity there has been a growing awareness of the fact that the basic noncooperative solution concept that of nash equilibrium suffers from severe drawbacks the two main shortcomings of this concept are the following i in extensive form games a nash strategy may prescribe off the equilibrium path behavior that is manifestly irrational specifically nash equilibria may involve incredible threats ii nash equilibria need not be robust with respect to small perturbations in the data of the game confronted with the growing evidence to the detriment of the nash concept game theorists were prompted to search for more refined equilibrium notions with better properties and they have come up with a wide array of alternative solution concepts this book surveys the most important refinements that have been introduced its objectives are fourfold i to illustrate desirable properties as well as drawbacks of the various equilibrium notions by means of simple specific examples ii to study the relationships between the various refinements iii to derive simplifying characterizations and iv to discuss the plausibility of the assumptions underlying the concepts

a major problem arising in airline alliances is to design allocation mechanisms determining how the revenue of a product should be shared among the airlines the nucleolus is a concept of cooperative game theory that provides solutions for allocating the cost or benefit of a cooperation this work provides fair revenue proportions for the airline alliances based on the nucleolus which assumes a centralized decision making system the proposed mechanism is used as a benchmark to evaluate the fairness of the revenue sharing mechanisms where the alliance partners behave selfishly additionally a new selfish revenue allocation rule is developed that improves the performance of the existing methods
