string algorithms are a traditional area of study in computer science in recent years their importance has grown dramatically with the huge increase of electronically stored text and of molecular sequence data dna or protein sequences produced by various genome projects this book is a general text on computer algorithms for string processing in addition to pure computer science the book contains extensive discussions on biological problems that are cast as string problems and on methods developed to solve them it emphasises the fundamental ideas and techniques central to today s applications new approaches to this complex material simplify methods that up to now have been for the specialist alone with over 400 exercises to reinforce the material and develop additional topics the book is suitable as a text for graduate or advanced undergraduate students in computer science computational biology or bio informatics its discussion of current algorithms and techniques also makes it a reference for professionals

unlock the full potential of dynamic programming with advanced techniques in

dynamic programming a comprehensive guide for java developers this book is your ultimate resource for mastering one of the most powerful algorithmic approaches in computer science tailored specifically for java developers it leads you through a detailed exploration of both the theoretical underpinnings and practical implementations of dynamic programming across diverse domains from foundational concepts like recursion and memoization to cutting edge techniques and practical applications this guide thoroughly covers essential concepts and patterns to equip you for tackling complex computational challenges whether your goal is to enhance your problem solving prowess excel in technical interviews or apply dynamic programming in industries such as finance bioinformatics or artificial intelligence this book provides clear explanations and efficient java based solutions with chapters focusing on optimizing java for dynamic programming graph algorithms string processing and more this guide caters to both novice and seasoned developers aiming to master dynamic programming through hands on examples optimization strategies and discussions on real world applications advanced techniques in dynamic programming offers a pathway to developing high performance solutions to computationally intensive problems embark on this intellectual journey and learn how the synergy of dynamic programming and java can transform your approach to solving algorithmic challenges elevating your programming expertise to new heights

one of springer s renowned major reference works this awesome achievement provides a comprehensive set of solutions to important algorithmic problems for students and researchers interested in quickly locating useful information this first edition of the reference focuses on high impact solutions from the most recent decade while later editions will widen the scope of the work all entries have been written by experts while links to internet sites that outline their research work are provided the entries have all been peer reviewed this defining reference is published both in print and on line

this proceedings is designed for computer scientists engineers and mathematicians interested in the use design and analysis of algorithms with special emphasis on questions of efficiency

this book constitutes the proceedings of the first international conference on language data and knowledge ldk 2017 held in galway ireland in june 2017 the 14 full papers and 19 short papers included in this volume were carefully reviewed and selected from 68 initial submissions they deal with language data knowledge graphs applications in nlp and use cases in digital humanities social sciences and bionlp

this book presents emerging trends in intelligent computing and informatics this book presents the papers included in the proceedings of the 6th international conference of reliable information and communication technology 2021 irict 2021 that was held virtually on dec 22 23 2021 the main theme of the book is advances on intelligent informatics and computing a total of 87 papers were submitted to the conference but only 66 papers were accepted and published in this book the book presents several hot research topics which include health informatics artificial intelligence soft computing data science big data analytics internet of things iot intelligent communication systems cybersecurity and information systems

the papers contained in this volume were presented at the fourth annual symposium on combinatorial pattern matching held in padova italy in june 1993 combinatorial pattern matching addresses issues of searching and matching of strings and more complicated patterns such as trees regular expressions extended expressions etc

the goal is to derive nontrivial combinatorial properties for such structures and then to exploit these properties in order to achieve superior performance for the corresponding computational problems in recent years a steady flow of high quality scientific studies of this subject has changed a sparse set of isolated results into a full fledged area of algorithmics the area is expected to grow even further due to the increasing demand for speed and efficiency that comes especially from molecular biology and the genome project but also from other diverse areas such as information retrieval pattern recognition compilers data compression and program analysis

the extensive use of the web by patients and laymen for health information challenges us to build information services that are easily accessible and trustworthy the evolution towards a semantic web is addressed and papers covering all the fields of biomedical informatics are also included

the first book to provide a comprehensive nonacademic treatment of the algorithms commonly used in advanced application development the authors provide a wide selection of algorithms fully implemented in c with substantial practical discussion of their best use in a variety of applications
